MIDI mapping

Standalone / 0.16.2

Controller → Cosmos

01 Learn a control

Open MIDI → MIDI Settings in Cosmos. Select the input port and channel for your pedal or controller. Choose a target, click Learn, then press the pedal or turn a knob. Assign ERASE ALL separately.

02 Tap or hold

In Tap mode each press can send just 127. In free recording the first press starts and the next stops. For Hold, send 127 when you press and 0 when you release.

03 Follow an external clock

In R / PR programs 1–9, start audio, enable MIDI Clock sync and choose 1, 2 or 4 bars. Start the external clock and transport, then press RECORD. Recording starts on the next bar. Programs 10–12 run freely.

Where mappings are saved

Cosmos presets save your mappings. Enable Program Change to recall populated slots 01–32 with PC 0–31.

Example CH 5 RECORD / CC 0 · ERASE ALL / CC 1

MIDI mapping

Ableton Live / Cosmos AU 0.1.10

Controller → Live MIDI Map → Cosmos AU

01 Map in Live

Insert Cosmos AU on an audio or return track. Enable Remote for the controller’s input port and unfold the device. Press ⌘M, select RECORD tap and press your pedal. Repeat for ERASE ALL tap. Press ⌘M again and save the Live Set.

02 Press and release

For each pedal, send 127 on press and 0 on release, on the same channel and CC. In free mode, press once to record, release to keep recording, then press again to stop. Erase clears only this instance’s loop.

03 Follow Live’s bars

In R / PR programs 1–9, enable Sync to Live bars. Start Live’s transport, then press RECORD to start on the next bar. Live maps directly to the parameter, so no separate MIDI track is needed.

If Live says “Waiting for pickup”

Release the pedal and press again. If Live still waits, check that release actually sends 0 on the same CC as the press. Live stores these mappings in the Set.

Example `CH 5` `RECORD / CC 0` · `ERASE ALL / CC 1`

MIDI mapping

Logic Pro / Cosmos AU 0.1.10

Controller → Logic Pro → Cosmos AU

01 Learn a parameter

Insert Cosmos on an audio track. Move a knob or click RECORD. Press ⌘L, check the parameter in Controller Assignments, then move your controller. Press ⌘L again to leave Learn mode. Assign the bottom-right Erase all button separately.

02 Set up a pedal

Send 127 on press and 0 on release using the same channel and CC. Choose Direct value mode in Expert View. In free mode one press starts recording and the next stops it. Erase clears only this instance.

03 Follow Logic’s bars

For R / PR programs 1–9, enable bar sync. Start Logic playback and press RECORD to begin on the next bar. Programs 10–12 run freely. Controller Assignments needs no extra MIDI track.

Where assignments are saved

Logic saves assignments in its controller settings on this Mac, across projects. If a different instance responds, check the target track, plug-in slot and input port.

Example `CH 5` `RECORD / CC 0` · `ERASE ALL / CC 1`
